Topic: Silicone & other contamination cleaning

The following instructions can be used to remove silicone and other ED paint contaminated.

As far as a procedure goes. We normally clean our tanks using a 1% concentration of Stage Cleaner 247. When the tank was contaminated I believe we repeated this process twice more bumping the concentration to 2-3%. Stage Cleaner 247 is a sodium hydroxide based cleaner w/ surfactants and wetting agents.

For more information see the original manual that came with the equipment or contact UFSc using the information at top of the page.
